Use this information to draw out full size patterns of all the plywood parts of the kayak. Plot the points on a large sheet of paper and use a flexible piece of wood or metal to connect them with smooth curves.

Refer to http://www.guillenmot-kayaks.com/ for more information.

Sample Layout on a standard sheet of plywood

The coaming lip and risers will need to be chopped up a bit to get the pieces out of the plywood. They will get glued back together and fiberglassed later.
